OLIVER WU

UX/PRODUCT DESIGNER

I am a Product & UX Designer with international experience across large-scale digital platforms and games. I specialize in complex systems, cross-platform interaction and multimodal UX, complemented by visual, audio and narrative design. I focus on diverse user needs, explore AI-enhanced workflows, and aim to create products with real user value and broad impact.

EXPERIENCES

UX DESIGNER — Tencent (Visual & Audio on select projects)
2024-12 ~ Present

Cloud Gaming & In-Car HMI Design

Responsibilities: Led HMI interaction architecture and UX upgrades for second-generation in-car cloud gaming, improving discovery, launch, connectivity and multimodal controls. Designed membership and storefront features; created capability showcases and promotional assets for automotive partners. Recently joined the START Cloud Gaming 2.0-to-3.0 upgrade, focusing on cross-device design consistency and membership UX.

Results: Supported the adaptation and delivery of in-car cloud gaming solutions for Huawei Qiankun and other automotive partners, helping showcase platform capabilities and expand business partnerships; contributed to cross-device UX improvements and product iterations for the launched START 3.0 platform.

AI Creative Workflows & Model Evaluation

Responsibilities: Participate in early-stage evaluation of generative AI audio models for video editors, content planners, music producers and sound designers. Analyze generation, selection, editing and post-production tasks, model limitations and real creator needs; explore reusable workflows for an internal AI creation platform.

Progress: Conducted multi-scenario model testing and workflow validation to support audio capabilities on Tencent's internal AI content creation platform, informing integration and UX design. (R&D and testing stage)

App Marketplace & Multi-Device UX

Responsibilities: Designed white-label app marketplace UX for hardware partners in China, bringing Tencent MyApp's catalog and distribution capabilities into their device systems. Defined home recommendations, category search, app details, download and installation flows, and adapted interactions and visual presentation across phones, tablets and handhelds.

Results: Supported marketplace design, brand customization and delivery for ASUS, Lenovo and nubia, enabling partner devices to offer an integrated system app store.

Game UX, UGC & Interactive Narrative

Responsibilities: Co-designed the in-game UGC hub for Animula Nook from the ground up, covering uploads, discovery, search and social sharing. Built and deployed an interactive web prototype with AI-assisted coding. Designed narrative UX, high-fidelity prototypes, UI/ability sound effects and BGM for League of Legends China live-ops, including Lingdong Adventure Team and Shenji Miaosuan; also contributed to DNF event interactions, GTS and confidential indie-game UX and audiovisual design.

Results: Enabled hands-on reviews of Animula Nook's pre-launch UGC experience and provided reusable CSS motion parameters. Supported League of Legends engagement and monetization goals; independently delivered UX, UI visuals, motion and prototyping for a GTS social mini-game ahead of launch.

Interaction Designer Intern — Tencent
2024-05 ~ 2024-08

Tencent Cloud Gaming — In-Car HMI Platform

Contributed to cross-platform HMI architecture, performance adaptation and controller usability testing across automotive OS and web environments, supporting partner deliveries for Huawei, BMW and Dongfeng Nissan.
